

GIELLE INDUSTRIALE S.r.l. belongs to the LANFRANCHI Group, owner of the brand "LAMPO" and world-class manufacturer of zip fasteners for the textile industry. In the production site located in Urago d'Oglio, surface processing of small metal parts and dyeing of tapes and chains are carried out exclusively for the Group's production of "Lampo" zip fasteners.

To give more structure to the Group's commitment, the Management has implemented at GIELLE INDUSTRIALE a system inspired by ISO 14001:2015 and ISO 45001:2018 standards, through which it intends:

- Promote activities aimed at compliance with applicable environmental and safety legislation, including directives, laws, authorizations and any commitments made with other external stakeholders.
- Always give priority to the safety and health of the workplace over production requirements and warn anyone against carrying out unauthorized or dangerous activities for their own health and for others, also in the name of economic advantage for the company.
- Adopt process and support plant solutions aligned with the best available technologies, within the limits of its financial possibilities, to promote the safety of operators and minimize the pollution impact towards the environment.
- Control of production processes according to criteria shared with the staff and oriented towards efficiency so as not to exceed the consumption of energy resources and chemical pollutants strictly necessary for the activity and minimize the risks to health and safety.
- Maintenance of plants and equipment to ensure not only their production efficiency, but also the maintenance of the safety conditions expected by the manufacturers, avoiding that tampering and degradation of performance can adversely affect safety and the environment.
- Manage waste carefully, sensitizing direct staff and subcontractors who access the site for construction, maintenance, restoration to collaborate to identify, signal, store and protect the waste until it is collected for disposal.
- Promoting the continuous improvement of environmental and safety performance (risk reduction, prevention of accidents and damage to health)
- Improving the system, that means, its ability to manage risks to the environment and safety with a preventive approach.
- Share information with other Group companies that may be useful to improve environmental, health and safety performance.
- Manage changes in the internal and external context in which the company is located.

- To not neglect the contribution of suppliers and contractors, translating into requests, instructions, contract specifications, the elements necessary to enable them to contribute to the implementation of the principles of environmental and security protection set out in this Policy.
- Involve Department Managers and Workers in Hazard Identification Activities and Suggestion of Protective Measures.
- To encourage the punctual recording of activities and data, including non-conformities, deficiencies, reports, near-accidents and accidents so that this information can be used as a basis for corrective action.

The Management is committed to give adequate resources to pursue the principles in this Policy, which is shared with the Staff and is available for consultation by anyone accessing the production site.

The Manager in head of the System is also responsible for transmitting a copy to anyone who requests it, keeping a record of its distribution.

Everyone working in the enterprise is called to contribute with their actions to the implementation of the principles expressed in this Policy, respecting the procedures and instructions established in the Management System.

This Policy is subject to periodic review by the Management and its level of implementation is assessed through the achievement of objectives congruent with it.
